# Fully Loaded for Sewing

The MC9900 has so many advanced sewing features, you could put away the embroidery unit and it would still be worth the price. It sews up to 1,000 stitches per minute. It has 9mm stitch width. And it's so very quiet—even at top speed.

Choose from 200 built-in stitches, including 6 button holes plus bar tack and darning stitches.

The new bobbin winder plate has its own cutting blades. Faster and smoother winding, a quick slice and you're ready to drop it in.

You can customise and combine stitches in a multitude of ways. More than two dozen can be flipped horizontally. Use the Favorite Stitch setting or save your customised stitches to the internal memory or a USB memory stick.

Need help with popular Sewing Tasks like inserting a zipper? The MC9900 Sewing Assistant walks you through.

The MC9900's needle plate has numerous guide lines, including angled lines to help you position your fabric exactly 1/4" from the cut edges, perfect for piecing and inset seams.

The easy-threading bobbin case and cover plate mean there's no need to pull long thread tails up and through when you first thread the machine. Slip the bobbin thread in the cover plate guide; the built-in cutting blades trim the tail to the correct length for a super-clean start to your stitching line. After the initial threading, the auto-thread cutter takes care of trimming and re-setting the tails each time.

Twin needle decorative stitching on the lapels of our teen's sample jacket was the perfect touch. Simply pick a stitch, select the twin needle option, add the secondary horizontal spool pin, thread and go.

Changing fabric types or weights? Change the needle plate in two steps. Pop up the regular plate. Snap in the Straight Stitch Plate. The screen automatically disables all but the straight stitch options. We were ready for accurate stitching on our super light tulle in minutes.

# Great for Embroidery

If you are looking for a great embroidery machine, you have found it. The MC9900 is a trim model with a unique embroidery unit that slides onto the back. It's such a sleek and clever design, you can switch back and do regular sewing without having to remove it.

This unit is more accurate and stable than the bulky attachments on machines costing much more. You can stitch out the finest lace designs with near perfection. Your monograms look terrific even up close. Multiple hooping are perfectly aligned.

Advanced on-screen editing tools make it easier to get your final layout exactly how you want it. And the expanded memory capacity lets you use embroidery designs with up to 200,000 stitches.

## I'm In The Mood For...

To really be creative, you have to be in the right frame of mind. Your MC9900 comes with three Quick Change Face Panels (with more optional colours coming soon) so your machine can match your mood.

## Smarter And Faster

The new generation of processor inside the MC9900 (the brains of the machine) is four times faster than its predecessor. You get everything done more quickly.

## All 65,536 Colours Of The Rainbow

Our high resolution touch screen is something worth seeing. With large dimensions and vivid colours, it's much easier to see what you're creating. The majority of embroidery machines in this price range have monochromatic screens, many of which are not even touch activated. For brilliance, colour range and interactivity, the MC9900 leads the way.

## It's The Little Things

Sewing and embroidery enthusiasts are passionate about the details in their projects... and on their machines. You'll love the MC9900's new bobbin winding plate with its own cutting blades, the bright and shadow-free lighting, the improved bobbin threading and bobbin cover plate, an extra high presser foot lift, and the updated on-screen Sewing Assistant.

## Designs From All Sources

The MC9900 comes with 175 built-in embroidery designs, the majority of them brand new, including exclusive designs by Jane Spolar, which we used to create our dramatic blazer embroidery. Or, use your PC to put embroidery files, or even whole layouts, on a USB stick. Plug it into the MC9900. Software isn't necessary; the machine formats a folder system for the memory stick. Open with the on-screen layout tools, and you're good to go.

## Create Your Layout Onscreen

You have so many choices here. You can drag and drop, resize, copy and paste, rotate in fine increments, change colours, and on and on. One feature you'll love is the ability to group colours to dramatically reduce the number of thread changes – a Janome exclusive. Look how our design went from 20 thread changes to just five!

1. CREATE THE ARRANGEMENT.

2. IT STARTS WITH 20 THREAD COLOUR CHANGES.

3. APPLY COLOUR SORT (A JANOME EXCLUSIVE).

4. READY TO STITCH WITH 5 COLOUR CHANGES.

5. HOOP AND STITCH.
